DuPont Laporte Update, November 21, 2014

- Elevated level of Methyl Mercaptan in the 3rd floor drain: DuPont added more bio enzyme to the drain and a decision was made to leave the material at least one day to ensure the product has enough time to work. EPA/START/DuPont will re-enter on Sunday morning to take readings.
- This weekend, EPA plans to sample the white power material, pH 11, found on third floor.
- CSB is off facility during interviews Fri/Sat but will be back onsite Sunday when EPA/START do entry. Not sure if they will go in with us.

NOTE: The next site update will be November 23, 2014.
